Description	
Hi	
Has the repos been moved?	
The Katello 3.6 yum repo has not been updated since 22/02/2018 and the nightly yum repo since 06/02/2018.

History

#1 - 03/14/2018 05:35 PM - Andrew Kofink

Nightly only gets published when this job passes <http://ci.theforeman.org/job/katello-nightly-release/>. It has been failing since Feb 5, and we're investigating the failures.

#2 - 03/15/2018 09:12 AM - Matthew Smith

Thanks for the update Andrew. Which version is known to be working? I've tested 3.4, 3.5, 3.6 and 3.7 using the latest CentOS 7.4 updates and epel updates and I have issues with all that prevents me to have a working provisioning system.

#3 - 03/21/2018 05:36 PM - Justin Sherrill

- *Tracker changed from Support to Bug*

- *Status changed from New to Need more information*

What issues are you having exactly? the nightly was just updated recently and 3.6 should be working

#4 - 03/21/2018 10:01 PM - Matthew Smith

Hi,

I reinstalled 3.6 and still get the same problems.

1. when I click create host I immediately get the following error message. It does not even get to the page to enter details.

2. Bug [#22717](#) is still there. In short when you sync Ubuntu repos there is no Operating System created automatically
3. Bug [#22720](#) is still there. In short the links that point the ubuntu conten views do not work properly. You have to go to parent first to access it.
4. What is the process to subscribe to a debian repo? ie Do we need subscription manager and katello agent for debian /ubuntu ?

#5 - 03/22/2018 12:34 AM - Justin Sherrill

That initial error looks like your db isn't migrated. What install commands did you run?

Do you still see that error if you run 'foreman-rake db:migrate

#6 - 03/22/2018 09:44 AM - Matthew Smith

I have found that I now have to run the install in 3 stages to get to where I want. If I run the second or third install command first it will fail (I can remeber I but I think it could be due to the foreman-rake db:migrate).

I just reran foreman-installer and as you can see it passed but when I go to create a host I get what looks like to be the same error.

```
[root@katello ~]# foreman-installer --scenario katello \
```

```

--foreman-initial-organization "${ORG}" \
--foreman-initial-location "${LOCATION}" \
--foreman-admin-username "admin" --foreman-admin-password "${PASSWORD}" \

Success! * Katello is running at <https://katello.localdomain> * To install an additional Foreman proxy on separate machine continue by running:

```
foreman-proxy-certs-generate --foreman-proxy-fqdn "$FOREMAN_PROXY" --certs-tar "/root/$FOREMAN_PROXY-certs.tar"
The full log is at /var/log/foreman-installer/katello.log
```

Create Hosts:

Oops, we're sorry but something went wrong undefined method `execution' for #<Nic::Managed:0x007f72ee9a41c0>

If you feel this is an error with Foreman itself, please open a new issue with Foreman ticketing system, You would probably need to attach the Full trace , relevant log entries, and it is highly recommended to also attach the foreman-debug output.

NoMethodError
