Pull request:	https://github.com/theforeman/foreman/pull/5328		

Description

When a user navigates to some foreman page via a turbolink link and then hits Back button in the browser, the previous page is displayed without react components.

Steps to reproduce:

1. Go to Administer >> Roles.
2. Click on [Filters] button of one of the roles and let the page load.
3. Check that react components like notification drawer and menu is working.
4. Hit Back button in the browser.
5. Result: The notification icon disappeared and the sub-menu is dysfunctional.

Another place where this can be reproduced is compute profiles page.
