Description	
From https://community.theforeman.org/t/katello-upgrade-from-3-4-to-3-5-fails-because-of-candlepin-version-candlepin-2-1-14-1-el7/8617/1 :	
<p>I had issues while upgrading from Katello 3.4 to 3.5, the issue because of candlepin version 2.1.14.-1. The cpdb did not accept the password even tried manually with the password there in /etc/candlepin/candlepin/conf.</p> <p>So I had to downgrade the candlepin rpm with 2.0.40-1(candlepin-2.0.40-1 and candlepin-selinux-2.0.40-1) then the upgrade works fine and all looks good.</p> <p>I don't know who else had tried to upgrade or installed 3.5 with candlepin 2.1.14-1 version but this should be a bug in the upgrade.</p>
