

Foreman - Bug #22963

Some API params are documented with wrong type

03/21/2018 01:57 PM - Martin Bacovsky

Status: New

Pull request:	
Description	
<p>There are many params across the whole API with invalid type validators. This is producing invalid types in API description which has impact on option validation in CLI.</p> <p>For example, there is :architecture_id in the hostgroup controller using :number as a type instead of Numeric or Integer</p> <pre>param :architecture_id, :number, :desc => N_('Architecture ID')</pre> <p>producing documentation with invalid expected_type</p> <pre>{ "name": "architecture_id", "full_name": "hostgroup[architecture_id]", "description": "\n\u003cp\u003eArchitecture ID\u003c/p\u003e\n", "required": false, "allow_nil": true, "allow_blank": false, "validator": "number.", "expected_type": "string", "metadata": null, "show": true, "validations": [] },</pre> <p>While documenting params in the API documentation we should use only valid type Validators [1][2].</p> <p>[1] https://github.com/ApiPie/apipie-rails/blob/master/lib/apipie/validator.rb [2] https://github.com/theForeman/foreman/blob/cb591e34f4e1f462b826a5f391bed20ceb192da3/config/initializers/apipie.rb#L71-L147</p>
