Description	
Using some MS DNS server, trying to update domain name of a Libvirt VM, Foreman fails to do so. It asks about overwriting the PTR, but it doesn't	

History

#1 - 03/13/2013 01:22 PM - Jaroslav Henner

Using some MS DNS server, trying to update domain name of a Libvirt VM, Foreman fails to do so. It asks about overwriting the PTR, but it doesn't overwrite the PTR, nor it changes the A records accordingly.

Workaround is to delete the PTR by hand, then updating the name.

Note it also causes a schizophrenic behaviour: `https://puppet.rhos/hosts/bar.xxx` in url, but `foo.xxx` as VM name.

Note that each record in AD DNS has separate ACL. The problem can be caused by ACL preventing the update.
