Pull request:	
Description	
it seems that since the introduction of STI to hosts, search is broken.	
its possible that the underling gem (scoped search) is unable to handle objects with STI.

- Status changed from New to Need more information

I can't replicate this. Searching for hostname, hostgroups, and build status all work fine in both views. Can you give more info on how to reproduce?

#2 - 05/30/2013 02:31 PM - Ohad Levy

- Status changed from Need more information to Resolved

this was an issue with the STI host module affair, cant reproduce - closing
