

Foreman - Bug #2339

Fedora 17 gems installing to wrong location

03/18/2013 08:22 PM - Anonymous

Status: Closed	
Priority: Normal	
Assignee: Sam Kottler	
Category: Packaging	
Target version: 1.2.0	
Difficulty:	Fixed in Releases:
Triaged:	Found in Releases:
Bugzilla link:	Red Hat JIRA:
Pull request:	
Description	
On Fedora 17 oauth-0.4.7, rbovirt-0.0.15, sexp_processor-4.1.2, and ruby_parser-3.0.1 are located under /usr/lib/ruby/gems/1.8/gems	
They should be in /usr/share/gems/gems with the rest.	

History

#1 - 03/19/2013 04:45 AM - Dominic Cleal

- Category set to Packaging
- Assignee set to Sam Kottler
- Target version set to 1.2.0

#2 - 06/05/2013 04:10 AM - Dominic Cleal

- Status changed from New to Closed

Gems have all been rebuilt via koji for Fedora 18, this is probably invalid now.
