

Foreman - Refactor #235

More robust handling of installation media URLs

05/03/2010 11:42 AM - Jochen Schaland

Description		
Foreman's handling of installation media and their respective URIs should be more robust.		
The attached patch file contains a proposed refactoring of the media handling for operating system families:		
<ul style="list-style-type: none">• Use URI class for any URI related operations• Added substitution for \$version, \$major and \$minor in media path• Force use of http(s), ftp or nfs URI scheme		
The last point introduces a small regression: NFS shares now have to be entered in the URI scheme specified in RFC 2224 (http://www.ietf.org/rfc/rfc2224.txt): nfs://server/path/.../ instead of server:/path/.../
