

Katello - Bug #23633

Activation keys tab on Hostgroup does not store its value and so kt_activation_keys parameter is not available at host provision

05/18/2018 09:59 AM - Dirk Götze

Status:	Duplicate	Fixed in Releases: Found in Releases: Katello 3.6.0 Red Hat JIRA:
Priority:	Normal	
Assignee:	Jonathon Turel	
Category:	Activation Key	
Target version:	Katello 3.6.1	
Difficulty:		
Triaged:	Yes	
Bugzilla link:		
Pull request:		
Description		
<p>In the activation keys tab on the hostgrouo I can select the activation key, but when I press submit and open the hostgroup again it seems like the activation key is not stored.</p> <p>There is also no parameter kt_activation_keys shown at the hostgroup or a host using this hostgroup which results in the host not getting registered as content host via subscription-manager.</p> <p>Setting the parameter kt_activation_keys directly at the hostgroup is not possible which is intended as far as I understood. Setting the parameter on the hosts works and lets the host register as expected.</p> <p>In the production.log is no error message, just a 200 OK for the POST /hostgroups which contains the correct activation key in group_parameters_attributes.</p> <p>Verified on an older test installation with Katello 3.5 that this is only a bug in 3.6.</p>
