Pull request:	
Description	
<p>"Unregister Host" needs a clear instruction for options under it :</p> <p>What is the nature and description of the request?</p> <p>Need a clear information on "Unregister Host" options as it deleted the host itself</p> <p>User wants a clear instruction of the following option " Satellite UI - > Content Host - > Host - > "Unregister Host" - > "Completely delete the host record and remove all reporting, provisioning, and configuration information" " as it shut down and deleted the entire host from ESX/compute resource.</p> <p>There should be a clear instruction that should indicate the option will delete the host itself.</p> <p>Provision a system on ESX with satellite and try to unregister it with the specific option.</p>
