<b>Description</b>	
<p>The existence of the zStreams tends to cause confusion with users. These should be hidden, perhaps in an "Advanced" section in order to make things work more clearly out of the box.</p>	
## Acceptance criteria	
<p>As a Katello UI user, I should be encouraged to enable repositories that do not specify a Y release version.</p>	
<ul style="list-style-type: none"><li>- Kickstart repository set repositories are never grayed or bolded</li><li>- Repository sets with a release version X (without Y) repository:<ul style="list-style-type: none"><li>- show X release version repositories in bold</li><li>- show X.Y repositories in gray</li><li>- show an 'info' icon next to X.Y repositories</li><li>- display a message on hover of 'info' icon next to X.Y repositories: "This repository has a ver y specific update policy. Please see additional [documentation] (<a href="https://access.redhat.com/articles/1586183">https://access.redhat.com/articles/1586183</a>) prior to use."</li></ul></li><li>- Linked documentation is publicly accessible</li></ul>

y streams are tracked for each repo in repo[substitutions][releasever]. Here are some repo examples:

```
[{"substitutions"=>{"releasever"=>"7.5", "basearch"=>"x86_64"},  
"path"=>"/content/dist/rhel/server/7/7.5/x86_64/os",  
"repo_name"=>"Parthas Red Hat Enterprise Linux 7 Server RPMs x86_64 7.5",  
"pulp_id"=>"6028bb20-a4d1-47ad-9766-ab6420e0a7cc",
```

```

"name"=>"Partha's Red Hat Enterprise Linux 7 Server (RPMs)",
"enabled"=>false,

"promoted"=>false,

"repository_id"=>nil},
{"substitutions"=>{"releasever"=>"7Server", "basearch"=>"multiarch"},

"path"=>"/content/dist/rhel/server/7/7Server/multiarch/os",

"repo_name"=>"Parthas Red Hat Enterprise Linux 7 Server RPMs multiarch 7Server",
"pulp_id"=>"a194d542-5103-4e76-8d06-227791906690",

"name"=>"Partha's Red Hat Enterprise Linux 7 Server (RPMs)",
"enabled"=>false,

"promoted"=>false,

"repository_id"=>nil},
{"substitutions"=>{"releasever"=>"7Server", "basearch"=>"x86_64"},

"path"=>"/content/dist/rhel/server/7/7Server/x86_64/os",

"repo_name"=>"Parthas Red Hat Enterprise Linux 7 Server RPMs x86_64 7Server",
"pulp_id"=>"979f3947-249f-4d6c-b2f9-598f7a44b4ab",

"name"=>"Partha's Red Hat Enterprise Linux 7 Server (RPMs)",
"enabled"=>true,

"promoted"=>false,

"repository_id"=>5}}

```

It's pretty straightforward to use the `releasever` to determine if a repo is specific to a y release.
