Target version:	
Difficulty:	Fixed in Releases:
Triaged:	Found in Releases:
Bugzilla link:	Red Hat JIRA:
Pull request:	
Description Steps to reproduce: 1) Install 1.18-rc1 with REX 2) Run a REX job 2) Take a look at the job invocation detail page Expected result: There should be a graph showing on how many hosts the job succeeded/failed and so on. Current result: There is no graph, "TypeError: e[t] is undefined" logged in the browser console

Seems like related to [#23924](#) - after updating to latest nightlies, I've not seen this error and the job invocation page just worked properly
