Revision 4acf2d6a - 06/16/2018 12:45 PM - Daniel Lobato Garcia

Fixes #23905 - Use /usr/share/foreman-proxy as ansible_dir

Using /etc/ansible means that the ~foreman-proxy/.ansible.cfg file we
had set up will be ignored. This means the callback is ignored and any
other options we might set in /etc/foreman-proxy/ansible.cfg

IMHO it should be configurable. Ideally we can change it to /etc/foreman-proxy/ansible in production for configs and /var/lib/foreman-proxy/ansible for
state. Currently we do this via symlinks in RPMs but that's a bit ugly IMHO.

It's configurable already, both in the installer or manually changing /etc/foreman-proxy/settings.d/ansible.yml. The issue is really just about the default
value

I think the suggested change is valid and already an improvement to current state. Even though config should not live in /usr, that's how we configure
foreman-proxy user home and that is where ansible searches for its config. Opening a refactoring issue for later split would be good, but we'd need to
handle upgrade path too. Sounds big for something we'll require for 1.18
