## Description

Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1590328

**Description of problem:**
the "last_checkin" and "global_status" attr. changes shouldn't be audited. This is currently audited and generates a lot of audit records.

**Version-Release number of selected component (if applicable):**
6.4.0-7

**Steps to Reproduce:**
1. register a content host to a satellite
2. check audits for a host-related record showing the global_status change
3. now edit the update interval parameter in  /etc/rhsm/rhsm.conf on the host to 1 minute and check the audit page for the host->last checkin records

**Actual results:**
the above attr changes are audited

**Expected results:**
the above attr changes are excluded from auditing
