Description

http://projects.theforeman.org/issues/23801

we should hide ostree-type repos on the redhat repos page if the ostree plugin is not installed.

Revision ded508ed - 07/06/2018 06:26 PM - Stephen Benjamin

fixes #23925 - match prod content type settings

Dev currently doesn't configure katello's plugin settings with the
enabled types, so for ostree, even if you set ostree to false, you'll
see see OS tree repos in dev (and they'll fail to enable). This adds
all the content types so dev looks more like prod setup.

This will only happen in a devel install, https://github.com/theforeman/puppet-katello_devel/pull/162 fixes it. Why was this created as a separate issue than #23801? They're the same bug AFAICT.

#5 - 06/28/2018 04:44 PM - Stephen Benjamin

Oh maybe it's different. My fix handles the part of the issue where ostree will show up in dev. The code is here to hide the repos already and works just fine in prod: https://github.com/Katello/katello/blob/master/app/models/katello/repository.rb#L215

But the actual RPM kickstart repos are flagged as yum type in the CDN and they show up in prod and CDN. How do we handle hiding those? Seems matching "Atomic" isn't really ideal.
