Pull request:			

Description

Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1588880

Description of problem:

Package Information field for Applicable and Installable (WEBUI> Content> Packages>) is not shown properly. Example:

httpd-2.4.6-80.el7.x86_64

Package Information

Installed On: 0 Host(s)
Applicable To: 0 Host(s) <==== wrong info
Upgradable For: 6 Host(s) <==== wrong info

Version-Release number of selected component (if applicable): 6.3.0

How reproducible: Always

Steps to Reproduce: (example)

1. Check package info on WEBUI> Content> Packages> httpd-2.4.6-80.el7.x86_64
It shows 0 Applicable and 6 Upgradable Hosts

2. On Hosts > Content Hosts > search for:

`applicable_rpms=httpd-2.4.6-80.el7.x86_64`

Result: It shows correctly 6 Hosts

3. On Hosts > Content Hosts > search for:

`upgradable_rpms=httpd-2.4.6-80.el7.x86_64`

Actual Result: Package Information displayed on Content > Packages >
for a particular package is showing back to front (which is wrong)

Expected results:

SatWEBUI > Content > Packages >

Package Information field should display correct information.

Additional info:

Another example for a package under Content -> Packages:

Current Package Information:

Installed On   7 Host(s)
Applicable To   43 Host(s) <= clicking on this will show list of 45
Upgradable For   45 Host(s) <= clicking on this will show list of 43
