Description	
<p>Hi,</p> <p>so we try to create a VM in a remote cluster, and every time we get this error message: "Fehler beim Erstellen einer Rechenressource Cluster-Remote (VMware) Instanz leola-gothe.pd.nil: InvalidArgument: A specified parameter was not correct: "</p> <p>The problem is, that the "specified parameter" is empty. We checked the config against our Cluster-Local config. Only difference is, that we use a smartproxy for dhcp and tftp.</p>
