History

#1 - 06/22/2018 01:41 PM - Marek Hulán

- Subject changed from Provide some template helpers for OS name/family and version comparsion to Provide some macros for OS name/family and version comparsion

#2 - 06/22/2018 01:48 PM - Marek Hulán

See https://github.com/ares/foreman/commit/5f413e658fe4591a6935fe760ad13b01da160fd3 - I could rebase and reopen the PR if you find this useful.

This was supposed to add macros like `host_os_minor` or `host_os_rhel_compatible?`, we could easily add thinkgs like `fedora?` or `debian?`

#3 - 06/25/2018 07:33 AM - Lukas Zapletal

- Status changed from New to Closed

Hmmm this was demo worthy, or I simply forgot. Had no idea.

#4 - 06/26/2018 08:14 AM - Lukas Zapletal

- Related to Feature #18205: Provide useful macros for templates and save_to_file helper added

#5 - 07/02/2018 06:28 AM - Marek Hulán

- Status changed from Closed to New

- Triaged set to No

It was never merged so it couldn't be demoed. That's why I say I could rebase and reopen the PR if you find this useful. Just let me know if this is what you had in mind in this issue.

#6 - 07/02/2018 08:19 AM - Lukas Zapletal

Oooh ticketing is hard. Please rebase I think we need to get rid of those constructs in templates.
