#### Description

Cloned from [https://bugzilla.redhat.com/show\\_bug.cgi?id=1593647](https://bugzilla.redhat.com/show_bug.cgi?id=1593647)

#### Description of problem:

When creating a compute resource of type EC2 (with some made up values), I click submit and get the error message:

\*\*\*\*\*

Oops, we're sorry but something went wrong uninitialized constant ComputeResourcesController::OVIRT Did you mean? Ovirt

\*\*\*\*\*

However, EC2 shouldn't have anything to do with oVirt(?).

Traceback attached.

This is a regression against 6.3.

The resource is not created after this.

#### Version-Release number of selected component (if applicable):

Sat 6.4, tested with snap 8

#### How reproducible:

Deterministic

#### Steps to Reproduce:

1. Infrastructure -> Compute Resources -> Create
2. Select provider EC2, fill in some random values
3. Submit

#### Actual results:

Error message, traceback, resource not created

#### Expected results:

Error message about invalid values, nothing about oVirt.
