

Foreman - Bug #24084

Password hash propagation (operatingsystem/kickstart template) to authconfig doesn't work

06/27/2018 05:53 AM - Lukas Kallies

Status:	Closed	
Priority:	Normal	
Assignee:	Lukas Zapletal	
Category:	Templates	
Target version:	1.19.0	
Difficulty:		Fixed in Releases: 1.19.0
Triaged:	No	Found in Releases:
Bugzilla link:	1563529	Red Hat JIRA:
Pull request:	https://github.com/theforeman/foreman/pull/5746 , https://github.com/theforeman/community-templates/pull/487 , https://github.com/theforeman/community-templates/pull/488	
Description		
<p>The operatingsystem definition lets you select a hashing algorithm (SHA256, SHA512, ...). This is written in uppercase. The value is used in the kickstart_default.erb (authconfig --passalgo=) which needs lowercase values.</p> <p>If SHA512 is selected (SHA256 is the default in kickstart_default.erb), authconfig will use SHA256 anyway because it has no value SHA512 (but sha512).</p> <p>This issue is also described in RH Bugzilla #1563529 (https://bugzilla.redhat.com/show_bug.cgi?id=1563529)</p>
