

Foreman - Bug #2416

`_puppetclasses_or_envs_changed.html.erb` does not honor the `RAILS_RELATIVE_URL_ROOT`

04/19/2013 09:57 AM - Sébastien Bernard

Description	
<p>We deployed foreman with a prefix URI /foreman. The application works ok with the <code>RAILS_RELATIVE_URL_ROOT</code> but for the import from smart-proxy. The page has a form with 2 buttons that points to an relative url without the "/foreman".</p> <p>We located the problem in the "app/views/common/_puppetclasses_or_envs_changed.html.erb". The links are like this: <%= form_tag "#{controller_path}/obsolete_and_new" do -> <= link_to "Cancel", "/" + controller_path, :class => "btn" %></p> <p>Once changed to : <%= form_tag eval("obsolete_and_new_#{controller_name}_path") do -> <= link_to "Cancel", eval("obsolete_and_new_#{controller_name}_path"), :class => "btn" %></p> <p>The links works ok with the prefix correctly appended. I'm not sur about the Cancel link. I've attached a diff file to the bug.</p>
