Description

I enabled debug logging and get only information messages in production.log. I touched restart.txt several times and still the logging is not taking effect.

```
:logging:
  :level: debug
  :production:
    :type: file
    :layout: pattern

# Individual logging types can be toggled on/off here
:loggers:
  :app:
    :enabled: true
  :sql:
    :enabled: true
```

Which file are you changing? Also could you try restarting the whole httpd service? Also note it should be tmp/restart.txt which is touched (not sure if that still works though)

Oh I see it has been already reproduced, please ignore my comment.

Yeah, bot could have set Triaged as well perhaps.

This does not seem to be 1.18 regression, the introducing commit was merged in 1.14. It should be possible to just move production configuration to one level above under :logging and it should work just fine.

#8 - 07/11/2018 04:11 PM - Trey Dockendorf

Using the documented method for debug logging works just fine:

```
:logging:
  :level: debug
```

I don't know where I got the idea to use the production key, maybe something from older version of Foreman that's no longer valid.

I think it was in example (commented), it is supposed to work and it had a bug. Fixed.
