Triaged:	Yes	**Found in Releases:**	
Bugzilla link:	1597364	**Red Hat JIRA:**	
Pull request:	https://github.com/Katello/katello/pull/7517		

Description

Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1597364

Description of problem:
When you have multiple subscriptions collapsed, as part of a group, the main subscription is not the top element. Instead, it is listed at the very bottom. This makes it seem as if there were no subscriptions consumed from the original, when looking at an uncollapsed list.

Version-Release number of selected component (if applicable):
Satellite 6.4 Snap 10

How reproducible:
Always

Steps to Reproduce:
1. Upload a manifest that contains a subscription that allows for guests.
2. Register at least two (preferably 10) hosts, consuming some of those subscriptions.
3. Go to the subscriptions page.

Actual results:
The top element of the collapsible subscriptions isn't the main subscription. Instead the main subscription is at the bottom or in the collapsed elements.

Expected results:
The main subscription is the top element shown, with its children collapsed below it.
