

## Katello - Bug #24214

### No applicable errata/updates on content host

07/09/2018 07:28 PM - Christine Fouant

<b>Status:</b> Closed	
<b>Priority:</b> Urgent	
<b>Assignee:</b> Christine Fouant	
<b>Category:</b> Errata Management	
<b>Target version:</b> Katello 3.7.0	
<b>Difficulty:</b>	<b>Fixed in Releases:</b>
<b>Triaged:</b> Yes	<b>Found in Releases:</b>
<b>Bugzilla link:</b> 1596049	<b>Red Hat JIRA:</b>
<b>Pull request:</b> <a href="https://github.com/Katello/katello-host-to-ols/pull/66">https://github.com/Katello/katello-host-to-ols/pull/66</a>	
<b>Description</b> Cloned from <a href="https://bugzilla.redhat.com/show_bug.cgi?id=1596049">https://bugzilla.redhat.com/show_bug.cgi?id=1596049</a>	
<b>Description of problem:</b> We registered content host to satellite 6.4 snap 9, but not able to see errata/updates for content host in satellite.	
<b>Version-Release number of selected component (if applicable):</b> Satellite 6.4 snap 9	
1. rpm -q satellite satellite-6.4.0-9.beta.el7sat.noarch	
<b>How reproducible:</b> always	
<b>Steps to Reproduce:</b> 1. Created activation key with rhel7 server synced 2. Registered rhel 74/75 content host #rpm -Uvh <a href="http://satellite/pub/katello-ca-consumer-latest.noarch.rpm">http://satellite/pub/katello-ca-consumer-latest.noarch.rpm</a> #subscription-manager register --org="Default_Organization" --activationkey="ak-rhel-7" #yum -y install katello-agent 3. Navigate Host -> Content host	
<b>Actual results:</b>  No applicable errata seen on content host. No errors in production.log and Package Profile Update task completed successfully.  Also note that content host has updates. Updates can pull from satellite using #yum update.	
<b>Expected results:</b> Errata/updates on content host should display in satellite.	
<b>Additional info:</b>

##### Revision 1ffbd8af - 07/11/2018 08:19 PM - Chris Duryee

Fixes #24214 - fill in vars on repo URLs

Previously, repo baseurls were sent as-is from redhat.repo to Satellite. This resulted in the client reporting it was subscribed to repos that don't exist, since the URLs would have the literal string ``$releasever/$basearch`` in it.

This commit adds dnf and yum code to populate ``$releasever`` and ``$basearch``. It will attempt to use DNF libraries first, and if that raises an ``ImportError``, it will try yum.
