Description	
<p>If you attempt to install the latest RPM for Fedora from the following location: https://theforeman.org/plugins/katello/3.8/installation/clients.html It will successfully install the Repo files and GPG key, but the contents of the repo file are for fc27, not f27. When yum tries to update it can't because the url is 404 not found. The fix is to change the repo from "baseurl=https://fedorapeople.org/groups/katello/releases/yum/3.8/client/fc27/\$basearch/" to "baseurl=https://fedorapeople.org/groups/katello/releases/yum/3.8/client/f27/\$basearch/", the same change needs to be made for the src rpms.</p>
