Triaged:	Found in Releases:
Bugzilla link:	Red Hat JIRA:
Pull request:	
Description	
<p>Puppetclass.search_for shows up in puppetclasses_controller and its respective method of the API. It uses scoped_search to look for all puppetclasses that a host contains. Unfortunately, in the event of a lookup of a host that either belongs to no hostgroup or a host that doesn't exist, this will return all puppetclasses.</p> <p>This fix checks for this conditions and avoids returning all puppetclasses.</p> <p>curl -v -k -H d"Content-Type:application/json" https://foreman/api/hosts/nonexistenthost/puppetclasses returns Puppetclass.all without this fix, after this fix it returns {} (no puppet classes, which is correct)</p>	

Associated revisions

Revision 7507fbce - 05/23/2013 08:13 AM - Daniel Lobato Garcia

fixes #2550 Puppetclass search_by_host doesn't return all classes for an unknown host

Tests for puppetclass API searches on nonexistent hosts

Puppetclass search_by_host does not fail if Host does not belong to any Hostgroup

Puppetclass search_by_host query looks for distinct puppetclasses instead of pruning them afterwards

Puppetclass pluck uses DISTINCT instead of .uniq on the result
