

Installer - Bug #25564

katello-certs-check gives the wrong output if using certificate with wildcard.

11/27/2018 11:24 PM - Suraj Patil

Status:	Closed	
Priority:	Normal	
Assignee:	Suraj Patil	
Category:	foreman-installer script	
Target version:		
Difficulty:	trivial	Fixed in Releases: 1.23.0
Triaged:	Yes	Found in Releases:
Bugzilla link:	1654326	Red Hat JIRA:
Pull request:	https://github.com/theforeman/foreman-installer/pull/347	
Description		
<p>If we try to install custom certs on satellite with wildcard i.e CN=*.example.com katello-certs-check gives the wrong output.</p> <p>katello-certs-check gives the command to generate the capsule certs as below instead of satellite-installer command.</p> <p>-----</p> <p>To use them inside a NEW \$FOREMAN_PROXY, run this command:</p> <pre>capsule-certs-generate --foreman-proxy-fqdn "\$FOREMAN_PROXY"\ --certs-tar "~/\${FOREMAN_PROXY}-certs.tar"\ --server-cert "/customcerts/cert.crt.pem"\ --server-key "/customcerts/cert_key.pem"\ --server-ca-cert "/customcerts/CA.crt.pem"</pre> <p>To use them inside an EXISTING \$FOREMAN_PROXY, run this command INSTEAD:</p> <pre>capsule-certs-generate --foreman-proxy-fqdn "\$FOREMAN_PROXY"\ --certs-tar "~/\${FOREMAN_PROXY}-certs.tar"\ --server-cert "/customcerts/cert.crt.pem"\ --server-key "/customcerts/cert_key.pem"\ --server-ca-cert "/customcerts/CA.crt.pem"\ --certs-update-server</pre>

Revision 86979bce - 07/18/2019 02:59 PM - Suraj Patil

Fixes #25564 - add target option

Rather than attempting to detect the target based on the hostname, this adds an explicit parameter which allows users to force the output to match their use.
