Description	
Fog needs to get updated to get rid of the error: Fog initialization failed - undefined method `security_groups' for class `Fog::Compute::OpenStack::Server'	
These did the trick for getting rid of it: ruby193-rubygem-excon-0.20.1-1.el6.noarch.rpm ruby193-rubygem-fog-1.10.1-9.el6.noarch.rpm ruby193-rubygem-net-scp-1.1.0-2.el6.noarch.rpm ruby193-rubygem-net-ssh-2.6.7-1.el6.noarch.rpm

Thanks for testing! I've built the latest version of fog as it might fix some VMware issues too. If you get the chance to try it too, I'd appreciate it.

That and the other packages you mentioned above have all been tagged for 1.2.0-RC2.
