

Foreman - Bug #2588

LDAP auth sources form labels not translated due to STI

05/30/2013 03:57 AM - Dominic Cleal

Status: Closed

Pull request:	
Description	
<p>When adding a new LDAP authentication source, none of the form labels have been translated. The field method in layout_helper calls s_() on the gettext Model Field string, but this doesn't work well with STI, returning the subclass name while the translation extraction uses the base STI class name.</p>	
<pre>122: content_tag :div, :class => "control-group #{fluid ? "row-fluid" : ""} #{error.empty? ? "" : 'error'}" do => 123: binding.pry 124: label = options.delete(:label) 125: label = (f.object.class.respond_to?(:gettext_translation_for_attribute_name) && 126: s_(f.object.class.gettext_translation_for_attribute_name attr)) if f [3] pry(#<#<Class:0x007f97e985cd60>>)> f.object.class.gettext_translation_for_attribute_name attr => "AuthSourceLdap Tls"</pre>	
<p>While the model attributes file is based off of the schema which doesn't have STI subclass names:</p>	
<pre>\$ grep AuthSource locale/model_attributes.rb tail -3 _('AuthSource Onthefly register') _('AuthSource Port') _('AuthSource Tls')</pre>
