Category:	VM management	
Target version:		
Difficulty:		
Triaged:	No	
Bugzilla link:	1687543	
Pull request:		
Description		
<p>It would be nice to see OS or possible host that VM is residing on. Ideally, we would like to add columns and customize the table ourselves.</p> <p>There are only 6 columns; Name, Folder, CPU, Memory, Power and Actions. Without additional information about VM, it is difficult find out what OS the VM runs (unless we have special naminch scheme for different operating systems).</p> <p>As a first step, we will need to measure the performance impact, as it is going to be the main breaking point to decide what information to show and what do not.</p>
