Pull request:	
Description	
<p>The scenario:</p> <ul style="list-style-type: none">- have a host with BMC interface with IPMI password provided- edit the host such that it causes additional confirmation dialogs (e.g. change the host's name and it asks you to confirm the overwrite in the DNS record)- the input field for BMC interface IPMI password is no longer disabled- saving host deletes the saved password <p>The last two should not happen.</p> <p>This issue is a long-standing one - I randomly lost IPMI passwords here and there since the beginning but only now discovered the culprit (hey, I'm a developer too, I know the pain of non-reproducible bug reports :-)).</p>
