Description Presently this method makes unnecessary checks for permissions (which could be handled by scope) and restricts itself to Host::Managed which can break Discovery. This should also be refactored to allow additional ways of finding a host. https://github.com/theforeman/foreman/pull/699	

Associated revisions

Revision 5b5af86e - 06/12/2013 10:34 AM - Greg Sutcliffe

Fixes #2644 - Refactor Host find_by_name to use several ways to find a host, and refactor my_hosts scope to Host::Base, allowing us to remove unnecessary permissions check from find_by_name

Revision 87bd795e - 06/12/2013 04:11 PM - Greg Sutcliffe

Fixes #2644 - Refactor Host find_by_name to use several ways to find a host, and refactor my_hosts scope to Host::Base, allowing us to remove unnecessary permissions check from find_by_name (cherry picked from commit 5b5af86ecd6f6b147aeb4dd4ceadd890dc9f2699)
