<b>Description</b>		
When the apache user is not part of the foreman group, the upgrade fails.		
The code in <a href="https://github.com/foreman/foreman-installer/blob/5a4f0d98390491fe4042f97d28ab779de8c709d0/katello/hooks/pre/30-upgrade.rb#L166-L179">https://github.com/foreman/foreman-installer/blob/5a4f0d98390491fe4042f97d28ab779de8c709d0/katello/hooks/pre/30-upgrade.rb#L166-L179</a> does check for the user not being in the group, but the method does not return "true" (or anything else that can be interpreted as a positive result) and thus the rest of the installer thinks it failed.
