<b>Pull request:</b>	<a href="https://github.com/foreman/foreman/pull/6810">https://github.com/foreman/foreman/pull/6810</a>	
<b>Description</b>		
<p>- Foreman sends generated public key and username from image through compute API and which save these values against VM. - It won't possible to edit VM configurations from google console as it gives error - 'Invalid key. Required format: &lt;protocol&gt; &lt;key-blob&gt; &lt;username@example.com&gt; or &lt;protocol&gt; &lt;key-blob&gt; google-ssh { "userName": "&lt;username@example.com&gt;", "expireOn": "&lt;date&gt;" }'  Need to make changes to format if required.</p>
