

Foreman - Feature #26641

Ability to set the file extension for generated reports

04/18/2019 07:17 AM - Marek Hulán

Status: Closed	
Priority: Normal	
Assignee:	
Category: Reporting	
Target version:	
Difficulty:	Fixed in Releases: 1.24.0
Triaged: No	Found in Releases:
Bugzilla link: 1701062	Red Hat JIRA:
Pull request:	
Description Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1701062	
Description of problem: When generating reports in Satellite 6.5 web interface, the generated reports have a ".txt" file extension. It would be nice if the user could specify what file extension the report should be created with (for example, ".csv", or ".html") so that the web browser could open the report in the appropriate application.	
Version-Release number of selected component (if applicable): Satellite 6.5 Beta	
Steps to Reproduce: 1. Generate report from Satellite 6.5 web interface	
Actual results: Generated file has .txt extension	
Expected results: Ability to specify the file extension on a per-report basis, so that ".csv", ".html", etc. could be specified for the file extension.

Revision e278f236 - 10/09/2019 01:54 AM - Marek Hulán

Fixes #25732, #26641 - report mimetypes and format (#6875)

- Fixes #25732, #26641 - report mimetypes and format

Detect whether a template supports selection of format by using report_render macro. If it does, allow a user to chose one of the supported format. If not use plain text.

History

#1 - 04/18/2019 07:18 AM - Marek Hulán

- Subject changed from - Ability to set the file extension for generated Satellite 6.5 reports
to - Ability to set the file extension for generated Satellite 6.5 reports

This will most likely be fixed with <https://projects.theforeman.org/issues/25732>, I think we should be able to select what formats are available for a given report template if more than one is assigned, during rendering, user should be able to choose one of them. That should also set the correct mime/type and file suffix.
