Description	
<p>Hi. I have a module:</p> <pre>class blah(\$var = \$blah::params::var) { include blah::params # stuff ... }</pre> <p>class blah::params { \$var = [''] }</p> <p>\$blah::params::var should be an array. So I tried to set the override key type on the " from String to Array and it just wont happen. If I put in a default value it will stick, but otherwise it will not.</p>
