<b>Description</b> Cloned from <a href="https://bugzilla.redhat.com/show_bug.cgi?id=1714357">https://bugzilla.redhat.com/show_bug.cgi?id=1714357</a>  <b>Description of problem:</b> It is now not possible to search host by value of certain parameter  <b>Version-Release number of selected component (if applicable):</b> satellite-6.6.0-5.beta.el7sat.noarch (snap 4)  <b>How reproducible:</b> always  <b>Steps to Reproduce:</b> 1. Have a host with parameter: Name: wrhSWIGmTG Type: string Value: yNQdKtCqYD 2. Attempt to search for that host on Hosts -> All Hosts with query "params.wrhSWIGmTG = yNQdKtCqYD"  <b>Actual results:</b> Error shown: Field 'params.wrhSWIGmTG' not recognized for searching!  <b>Expected results:</b> Search should work  <b>Additional info:</b> Also mentioned here: <a href="https://community.theforeman.org/t/api-search-host-parameter-value/14032">https://community.theforeman.org/t/api-search-host-parameter-value/14032</a>  Marking as a regression as according to tests this worked before.
