

Installer - Refactor #2702

The common modulepath should be consistent with production and staging

Description Right now the installer uses <code>/etc/puppet/environments/{staging,production}/modules</code> for each environment, but <code>/etc/puppet/environments/common</code> for the common modules. This should probably get changed to <code>/etc/puppet/environments/common/modules</code> .	

History

- Assignee deleted (Sam Kottler)

We should probably call this path deprecated now, since Puppet itself defaults `basemodulepath` when using directory environments to include `/etc/puppet/modules`. which might be a better recommendation for a "common" dir.

#2 - 10/06/2017 08:57 AM - Ewoud Kohl van Wijngaarden

- Status changed from New to Rejected

I think in our current config we prefer directory environments and those solve it properly. Closing.
