Triaged: No	Found in Releases:
Bugzilla link:	Red Hat JIRA:
Pull request:	
Description	
<p>Currently a VMWare datastore can be selected. If there is not enough space, the enrollment writes the disk full and ALL VMs stop in the LUN!</p> <p>It must be possible to read and display the storage space occupancy via VMware SDK. If a datastore has less than x percent space, a deployment must be prevented!</p>
