Pull request:	
Description Cloned from https://bugzilla.redhat.com/show_bug.cgi?id=1727928	
Description of problem: When I don't select errata type while generating the Applied Errata report, it produces empty output. Not even header is in the resulting file.	
Version-Release number of selected component (if applicable): Reproduced on Sat 6.6 snap 10.	
How reproducible: Deterministic	
Steps to Reproduce: <ol style="list-style-type: none">1. Have a Satellite, a content host fully registered to it (bootstrap, katello-agent)2. Have some erratum applicable to that content host3. Go to the content host page -> Errata4. Select some erratum5. Click "Apply Selected"6. Monitor -> Report Templates7. Generate "Applicable Errata"8. Default values, Submit	
Actual results: Empty file	
Expected results: File with at least a header and an entry for the applied erratum. I think not filling the field should be interpreted as "all".	
Additional information: Tested with errata applied through katello-agent because I'm blocked on testing with remote execution due to bug 1727927.
