Category: Users, Roles and Permissions	
Target version:	
Difficulty:	Fixed in Releases:
Triaged: No	Found in Releases:
Bugzilla link:	Red Hat JIRA:
Pull request:	
Description	
When assigning the administrator flag to a user in Administer -> Users for a user with restricted authorization (e.g. by assigned roles with filtered permissions) some of those filtered permissions might not be granted despite the administrator status.	

History

#1 - 08/12/2019 10:34 AM - Tomer Brisker

When setting administrator flag, all user permission checks always pass so that limited roles have no affect on the user - could you be more specific about what permissions are still not granted properly?

#2 - 08/12/2019 10:36 AM - Tomer Brisker

- Status changed from New to Need more information

#3 - 08/19/2019 07:43 AM - Fabrice Brimioulle

- File *Role_Restart_service_only.png* added

- File *Reports.png* added

Example:

-Create the role "Restart service only" (see attaches screen shot)

-Assign it to a user

-Check the flag "Administrator" for this user

-Now go on a "not-CentOS"-Host and try to show the reports:

although the user is marked as administrator and there are reports available, this user cannot see the reports (see second screen shot)

#4 - 07/15/2020 01:30 PM - Tomer Brisker

- Category changed from 218 to Users, Roles and Permissions
