

Foreman - Bug #27704

Show only datastores of corresponding cluster/ESX-Host

08/26/2019 08:00 AM - Daniel Schumacher

Status: New	
Priority: Normal	
Assignee:	
Category: Compute resources - VMware	
Target version:	
Difficulty:	Fixed in Releases:
Triaged: No	Found in Releases: 1.21.3
Bugzilla link:	Red Hat JIRA:
Pull request:	
Description	
If I choose an cluster or ESX host under the VM Compute Profile, the storage selection shows me always ALL datastores from my VMware Datacenter! So it is possible to select an ESX host with the wrong datastore, and the deploy will be failed! The datastore should be filtered after an cluster or ESX host is selected.

What version of Foreman do you see it with? I think this has been recently fixed.

Hi Marek,
I use the version 1.21.3
