

Foreman - Bug #2782

LDAP Auth Source Account Password reset

07/12/2013 11:43 AM - keith obrien

Status: Closed	
Priority: Low	
Assignee: Joseph Magen	
Category: Authentication	
Target version: 1.2.1	
Difficulty:	Fixed in Releases:
Triaged:	Found in Releases:
Bugzilla link:	Red Hat JIRA:
Pull request:	
Description	
Seems to be a regression Bug "872".	
It seems when making changes to an LDAP Auth Source that the fake masked password (which seems to be 'xxxxxxxxxx') then actually becomes the password to use for the Auth Source, thus making the password invalid and 'breaking' the Auth Source.	
Reproduce: In a working LDAP config simply open "LDAP Authentication" for editing and click save.	
Version affected: 1.2.0+debian0.3 1.2.0+debian2

seems like a missing password field, Joseph, can you have a look?

thanks
