Description

Hello,
Randomly i have the error given in object in the log foreman.
This error appears as a result of an API call : /foreman/api/compute_profiles/5 (i only have one id)
I have 2 platforms (production and integration) where i have the same symptom.

foreman Version : 1.22.1
tfm-rubygem-fog-vsphere version : 3.2.1

The result is that external app calls using the API fail.
I attach an excerpt from the log corresponding to the error.

Regards

Hello, I am now in version 1.24.2 of Foreman and I still have this problem. Before it was often on the test platform. Now is also often on the production platform. Is it possible to have help? Thanks

Hi, sorry for the delay.
Is this happening even if you turn off the cache on the compute resource?
