Difficulty:		**Fixed in Releases:**	
Triaged:	No	**Found in Releases:**	
Bugzilla link:		**Red Hat JIRA:**	
Pull request:			

Description

```
---
:bind_host: ['*']
:http_port: 8000
:daemon: true
:log_file: /var/log/foreman-proxy/proxy.log
:log_level: DEBUG
:daemon_pid: /var/run/foreman-proxy/foreman-proxy.pid
```

With the following smart-proxy config, regardless of DEBUG level, the logs will contain plain "[E] Error during startup, terminating" without any details what's wrong.

History

#1 - 03/04/2020 12:15 PM - Ewoud Kohl van Wijngaarden

Which operating system are you on? It may be that /var/run is on a tmpfs and the directory isn't created but on systemd based platforms we should run the proxy in the foreground and the pid shouldn't be used.
