Katello - Bug #28369

Wrong error message when trying to disable a Red Hat Repository

11/26/2019 09:58 PM - Jeremy Lenz

Description

Actual behavior:
When a user without the edit_products permission tries to disable a Red Hat Repository, the following error message is returned:

"Repository cannot be deleted since it has already been included in a published Content View. Please delete all Content View versions containing this repository before attempting to delete it."

If the user is given the edit_products permission, they are able to disable the repository successfully.

Expected behavior: The user should instead get a message referencing the required "edit_products" permission.

Steps to reproduce:

1. Create a role with the following permissions:
Subscription: delete_manifest, attach_subscriptions, unattach_subscriptions, manage_subscription_allocations, import_manifest, view_subscriptions
Product and Repositories: view_products

2. Create a user and attach this role and the Viewer role. Log in as (or impersonate) the user.
3. Navigate to {FOREMAN_URL}/redhat_repositories
4. If no repositories are enabled, enable one
5. Click the minus button (-) to attempt to disable a repository. The error will be displayed.
6. Log in as Admin. Edit the role you created and add the edit_products permission under Product and Repositories.
7. Log in as the limited user again. Navigate back to the Red Hat Repositories page and observe that you can now disable the repository without an error.
