

Foreman - Bug #2849

Changing a host name, causes errors when a user wishes to rebuild the host.

07/28/2013 03:07 AM - Nir Magnezi

Status: New	
Priority: Normal

Pull request:	
Description	
Description of problem: I tried to change an existing host name and in some of the times theforeman did not allow it (complained about duplicate IP / MAC addresses). In other cases theforeman allowed me to change the host name but complained about the same error when I tried to rebuild the host.	
Version-Release: 1.2.0	
How reproducible: 3/3	
Steps to Reproduce: 1. Add a Host to theforeman. 2. Change The host name 3. Go to the host page: /hosts/<host fqdn>">https://&lt;theforeman fqdn>/hosts/<host fqdn> 4. Click Build	
Actual results: Fails with the following error: Failed to enable <host fqdn> for installation: ["Ip has already been taken", "Mac has already been taken"]	
Expected results: No Error should be expected here.	
Additional Information: I tried to delete my Host and re-add it to theforeman (as a workaround), but theforman did not allow me to add the host with duplicate IP / MAC error.	

History

#1 - 07/29/2013 03:04 AM - Dominic Cleal

- Priority changed from Urgent to Normal

#2 - 08/04/2013 05:32 AM - Nir Magnezi

- File `rename_machine.log` added

- File `setting_build_stat.log` added

Find attached foreman logs (debug mode enabled):

- `rename_machine.log` is when I just tried to rename an existing machine.
- `setting_build_stat.log` when I tried to set a machine which was renamed to build state.
