<b>Description</b>		
Currently only users and hosts can be loaded in report templates. We should allow access to all objects with safe mode defined where applicable (e.g. tokens or nics don't make sense)

Fixes #28769 - add more loader macros

There are multiple objects that has Jail defined but can't be loaded in a sane way. This patch adds load\_\* macros for all such objects. It also extracts loaders from base macros to separate file. Load macros are defined dynamically to avoid repetition of definition and to unify capabilities of all such macros.
