

Foreman - Bug #28855

Database template finder ignores taxonomy

01/24/2020 01:17 PM - Lukas Zapletal

Pull request:	https://github.com/theforeman/foreman/pull/7386	
Description <p>When unattended controller renders a template, it finds it in a correct taxonomy in method provisioning_template, but then it is passed into the renderer outside of the taxonomy block in TemplateRendering#render_template. Therefore all snippets being loaded via SnippetRendering#snippet (source.find_snippet(name)) is called without Taxonomy handling (basically unscoped SQL query). This is possibly a security issue as well when all snippets are essentially shared across all organizations even when taxonomy is not set like that.</p>
