Description

Today, all access from foreman to VMWare is done using a central account. It would be good if VMWare would be accessed using the credentials of the user logged in to foreman instead. This would allow e.g. quotas and restrictions on the VMWare side to be applied to the individual users instead of limiting the one central foreman user which affect the entire foreman instance.

History

#1 - 08/07/2013 03:47 AM - Dominic Cleal

- Category set to Compute resources

#2 - 08/07/2013 04:06 AM - Ohad Levy

You are not forced to use one Compute Resource per foreman instance, you could configure multiple instances, each one with a different quota?

#3 - 09/26/2014 07:02 AM - Dominic Cleal

- Category changed from Compute resources to Compute resources - VMware
